## Amazon echo dot price history

Our best Amazon Echo prices roundup is here to sort you out with one of the best voice-controlled smart speaker money you can buy. These great little devices are responsible for bringing smart home functionality to millions of homes, and it's easy to understand why they're so popular. The good news is that two brand new Echo Dots have just arrived this month for 2020, and we've already included them alongside the older iterations below, complete with a little review for you to check out. Of course, all the old favorites are here this week, and we'll also provide the best prices for them, as well as some handy tips on how to get the best Echo Dot deals all year round. There's now an Echo speaker for every occasion, thanks to Amazon's ever-growing lineup of releases that add new additions every few years. We also see some great updates for older models that bring a number of speaker upgrades as well as new software. As always, the small Amazon Echo Dot offerings start today at the cheaper end and offer a good starting point for any smart home. If you are just looking for pure Alexa functionality, we also have the best Echo Flex prices to go. We also have prices for the larger versions including the Amazon Echo, Echo Studio and more. If you also want a visual element, then we have covered you with all three sizes of the Amazon Echo Show or the bedside table-friendly Echo Spot, all of which contain a screen. Although Amazon designed and built these smart devices, they are actually available in a large number of stores, which means they are never far from a discount. We'll also list the default price of each of these Amazon Alexa speakers to give you a better idea of how good the latest discounts are in the comparison charts. (Photo credit: Amazon) The new Amazon Echo is here this year, the fourth generation in the tech giant's long line of outstanding smart speakers. No, their eyes don't fool you, it's indeed much, much spherical than last year's iteration, but luckily all this extra space around the waist was well used with some improved internals. A new speaker array is designed to give music lovers a much higher loyalty experience, while including the new Amazon Sidewalk and Zigbee support should help with smart home compatibility. You'll also get a new 'A21 Neural Edge' processor on board this year, which Amazon claims will double voice command recognition - not bad considering this new iteration is being sold for the same price as last year's release. Amazon) Equally spherical, but much smaller is the endearingly cute new Echo Dot - the fourth generation in Amazon's long line of excellent budget smart speakers. With a start of only 49.99 dollars / 49.99 dollars / 79 dollars, it remains one of the cheapest ways to get your hands on a voice assistant this year, but almost disappointing, disappointing, of its new eye-catching spherical design, improvements are mostly iterative. That means the new recording of Alexa Voice Profiles for Kid is a fantastic little feature if you have kids in the house. This new child-friendly technology can detect when a younger person gives voice commands and adjusts their reception accordingly. So when the child asks Alexa a question, he gets an appropriate answer, animal alarm and even helps with his homework when he needs it. (Photo credit: Amazon) The note is in the name. Coming onto the market as one of the latest Echo devices, the Echo Flex is an extremely flexible Alexa speaker. We use the term loudspeaker quite loosely as you won't choose this cheap Echo device for its audio quality (it's not great). What it has to offer is an extremely handy plug-in to glue Alexa functionality into any free power outlet. Talk to your virtual assistant and control your smart home like any other Alexa-enabled device, but for far less than you would normally exhibit for a full-fledged speaker. With additional accessories on the way, this cheap Echo device is perfect if you want to add your smart assistant to every room in the house, but don't want to cough up every time for an entire speaker. (Photo credit: amazon ) Now with a handy, discrete DisplayAmazon Echo Dot with Clock Launch price: 59.99 USD/59.99 USD/99. The 2019 model Amazon Echo Dot with watch is only a modest upgrade. It is technically still a 3rd generation Echo Dot, but now comes with a neat display on the page that can display time. Amazon says one of the most frequently asked questions is Alexa for the time, so this will save you a job. Many of us use smart speakers as a timer in the kitchen, so we're glad to see that the display is being used to show the timer that counts down. It will also show the temperature when asked about the weather. Other types of requirements will use this additional functionality in the near future. The only other improvement over the previous model is a Tap to Snooze option when the point is used as an alarm. If these new features don't do much for you, then you can save some money by opting instead for the regular Echo Dot deals below. Amazon Echo Dot (3rd Generation) Starting Price: 49.99 USD / 49.99 USD / 79 USD. The older, standard 3rd iteration of the Echo Dot is available in three colors - charcoal, heath grey and sandstone (this will be black, grey or white for the rest of us). The hockey puck-shaped speaker has a more refined look thanks to the fabric finish - far better than the older all-plastic version. The loudspeaker driver is also much larger, from a to 1.6 inches. It is 70% louder than the previous version and considers the aux 3.5mm connection to be a secondary speaker. You can also connect it wirelessly to external speakers via Bluetooth. (Photo credit: Amazon) The standard size Echo now sounds better than everAmazon Echo (3rd generation 2019) introductory price: 99.99 USD / 89.99 USD / 149 USD. The standard size standard size Echo speakers are getting better every iteration and this new 3rd generation model marks the biggest improvement yet, especially for music fans. The audio architecture now matches that of the more expensive Amazon Echo Plus thanks to the neodymium drivers, a larger 3-inch woofer, and a larger tweeter. It is always something chunkier than the 2nd generation model, while retaining the same height. However, the overall aesthetic is retained thanks to the fabric design, although Amazon has introduced a new color for the occasion in Twilight Blue (see picture above). If you already own a dot and want to round off the sound with a little extra oomph, then this will be a great purchase. Or if you don't have to buy an Alexa speaker yet, this is a great place to start when playing music will be one of the main reasons why you buy one. The upgrade for music fansAmazon Echo (2nd generation) starting price: 99.99 USD / 89.99 USD / 119 USD. With a newer version on the shelves, we would only go for this version of the Amazon Echo if there is a significant discount. And as the stores begin to clear stock for the new Echo, we should soon see great deals. The 2nd generation Amazon Echo was the fixed middle ground of the Alexa family, with a more powerful speaker than the Echo Dot. This second-generation version is slightly shorter, but has an improved speaker powered by proper Dolby processing. At the start, this was the right option in the Echo series. It's not as budgetased as the Amazon Echo Dot, nor is it as premium as the Amazon Echo Plus. In 2017, you would have bought this if you wanted to use the smart speaker primarily for high-quality music, but wanted to keep prices low. Today, the latest third generation Echo does a much better job at the same price. If you see that it is reduced, check the status of the third generation price tag before making your purchase. (Photo credit: Amazon) Amazon Echo Show 8 Starting Price: 129.99 USD/119.99 USD/AU-TBC. Shortly after the release of Show 5, Amazon came up with the Amazon Echo Show 8 and a larger screen. So while you prefer the smaller Echo Show 5 for a bedside table, the new Show 8 works better in larger rooms. If you are looking for hands-free recipe instructions in the form of kitchen video tutorials, then this is ideal. The Echo Show second generation offers a larger screen, but this 10-inch display has a significant price jump. This 8-inch screen is perfect for greater use than you'd need from a bedside table without offering a hefty price tag to match. You'll also get the superior display and audio quality of the Echo Show (2nd generation) with all the privacy and app benefits that come with the Show 5. It is a fusion of the best bits of the last two models, which comes with a price tag that sits closer to the cheaper end than the premium 2nd generation. (Photo credit: Amazon) Amazon Echo Show 5 Starting Price: 89.99 USD / 79.99 USD / 129 USD. This is the cheapest Amazon Echo Show you'll find out now in the wild. It comes with a Five-inch screen than the other Echo Show deals in this list, but if you're looking for something for a bedside display, or you just don't need another intrusive screen in your living room, it will fit perfectly. Compared to its larger siblings, or Google's rival offerings, you can find the screen a little small, depending on where you'll see it after requesting something about the Alexa voice commands. You'll also miss out on the improved display and audio quality of the newer Show 8. But the huge selection of how-to videos is super handy if you can plug it in nearby, especially in the kitchen. Check out our full Amazon Echo Show 5 review if you want to learn more about this low-cost smart speaker display. Amazon Echo Show (2nd Generation) Starting Price: 229.99 USD / 219.99 USD / 349 €. Amazon has released an update for 2018 for the Amazon Echo Show, the Alexa Smart speaker with touchscreen. As things stand, it is a bit more expensive than the previous version and much more expensive than the competing Google Home Hub prices. With the original model completely decomposed, however, this is the only way to get it on this classic Mega 10-inch display. The oldest Amazon Echo Show on this list has the largest screen, with louder speakers and superior display quality above Show 5, but offers a similar experience to Show 8. This makes it much better suited for video content to be enjoyed via your Amazon Prime membership or for free on other channels. Of course, you can still use it as a smart rod for other devices such as smart thermostats or light bulbs. This is more important than ever, as many smart devices don't need their own hubs to work - just dive right into the Alexa ecosystem. A slightly outdated smart speakerAmazon Echo Plus (2nd generation) introductory price: 149.99 USD / 139.99 USD / 229 USD. Amazon has revamped the Echo Plus smart speaker at the end of 2018. Then the Echo was revised in 2019. Now they look pretty similar. The truth is that the second generation Echo Plus carries the same speaker configuration as the new Amazon Echo third generation, which it also pulls off for much less money. That is, when the second generation Echo Plus was released in 2018, it marked a step in Alexa's audio quality order. So why pay more for the same speaker released a year earlier? If you are using Zigbee Smart Home devices, you don't want to rush the older model. The latest echo support of the third generation has discontinued the Zigbee support, while you can still find it here on the Echo Plus second generation. This is the main advantage of the Echo Plus, and possibly the only reason you should pick it up - the fact that it has built in a Zigbee Smart Home Hub. (Photo credit: Amazon) If you've been looking at the Echo Sub for a while and want you to be able to add the smart speaker to the fantastic sound for a complete package, check out Echo Studio 2019. The massive echo Loudspeaker works as a complete high-quality audio solution that not only offers impressive sound quality for its price tag, but can also easily create a home theater with a Fire Stick. Amazon has raised its Echo Studio as low in price as possible - excellent times for all bargain hunters out there. Don't be fooled by this relatively low price, this is a powerful speaker. While the 3D audio can be hit and missed, we found that the Echo Studio offered fantastic value for money with powerful sound and a wealth of features. Audio Upgrade Your Existing Smart Speaker SetupAmazon Echo Sub Launch Price: 129.99 USD / 119.99 USD / 199 €. If you all go home in the Amazon Alexa Audio Setup, then you should take a look at the latest Amazon Echo Sub prices. However, the Echo Sub is not an intelligent speaker, it is a subwoofer to connect to your other Echo speakers, so you need to pick up one of these speakers (you're already on the right side for them!) if you don't already have one. Or take a look at some of the available packages, as Amazon has started selling the Echo Sub with a pair of regular Echo speakers in some regions to give you a full stereo sound setup at home. If you prefer to have just a beast of a smart speaker with a huge sound, then you should check out the latest Amazon Echo Studio, although it's a little cheaper. Amazon Echo Spot Starting Price: 129 \$ / 119.99 USD / 179 €. The Amazon Echo Spot has been discontinued, meaning it's unlikely you'll find a particularly impressive price drop in the foreseeable future - at least not one that makes it more valuable than a Show 5. The small, round screen is designed to show you little information instead of watching episodes of The Grand Tour or Mr Robot. The 2017 model hasn't seen much action in the last three years, so you'll be better off picking up something newer. Newer.
